

Every morning, I leave my home in Gettysburg, PA, and commute to work 59 miles to BWI airport in Baltimore, MD. Before I cross the Mason Dixon Line into Maryland, I tune to XM Radio channel 213. This gives me the up to date traffic report I need to navigate my way to work. And since I also spend my day out doors working on commercial aircraft, I also find the XM Radio weather updates most informative. That said, it was my personal choice to purchase the XM satellite system. And I feel that if I'm willing to pay the cost for satellite radio, I should not have to worry about my traffic and weather report being taken away from me.

So, I am urging you, the members of the FCC, to PLEASE reject the NAB's petition 04-160  
Thank you
